

ACA[®] Plus[®]
7-0-0 with 8.5% Zinc

Wheat, Barley, Oats

ACA Plus is a plant nutrient blend of zinc ammonia acetate. **ACA Plus** is seed-safe, has a low odour and a neutral pH. **ACA Plus** can be applied in furrow with the seed or applied as a seed treatment on the seed.

Conditions When ACA Plus Application is Most Advantageous

- Allows your cereal crop the ability to attain increased yield potential when more root growth is the limiting factor
- Early and late planting date for the area
- Cold and wet soils
- Compacted soils
- Zinc deficient soils
- Soils with less than adequate water holding capacity

Features of ACA Plus

- Promotes early root growth resulting in greater yield potential
- Can be applied in furrow or as a seed treatment
- Applied in the standard planting operation
- Flexibility of mixing with liquid starter fertilizer or impregnated on dry starter fertilizer or with **DB Red seed treatment**
- Economical product to enhance root growth as well as correct specific nutrient deficiencies
- Excellent zinc source with ammonium acetate to extract beneficial nutrients from the soil

Aca Plus Use Rates

- Apply **ACA Plus** at the rate of 1 litre per acre in furrow alone or tank mixed with liquid or dry fertilizer
- Apply **ACA Plus** at the rate of 4-5 oz per cwt of seed either alone or with **DB Red seed treatment**
