

DB-RED™ L

SEED TREATMENT

AGSCO DB-RED L is a ready to use broad spectrum fungicide seed treatment developed to protect seeds and seedlings from diseases that can damage the seed, inhibit germination and reduce emergence and plant vigor. University and independent research in the Northern Plains of the United States and Canada shows that maneb (DB-RED L) provides excellent control of many seedling diseases.

DB-RED L is packaged as a ready to use liquid formulation and is designed for use with the AGSCO Air Treating System™.

Why Should I Treat?

Soil and seedborne diseases pose a serious threat to an unprotected seed at planting time. Soil and seedborne diseases can attack the seed, inhibiting germination and emergence. Certain soil conditions may make seed susceptible to fungi that cause seed decay, seedling blights, and root rots.

CROPS: wheat, barley, oats, and rye.

ACTIVE INGREDIENT: maneb

CONTROL OF:

wheat: common bunt, root rot, and seedling blight (including Fusarium)

barley: covered smut, false loose smut, root rot, and seedling blight

oats: covered smut, root rot, and seedling blight

rye: common bunt, root rot, and seedling blight

APPLICATION RATES:

wheat: 78 ml / 25 kg seed

barley: 99 ml / 25 kg seed

oats: 138 ml / 25 kg seed

rye: 65 ml / 25 kg seed

ALWAYS READ AND FOLLOW LABEL DIRECTIONS.
