PRECAUTIONS

KEEP OUT OF REACH OF CHILDREN

Concentrate may cause skin damage.
Do not get on skin, eyes or clothing.
Use waterproof gloves and face shield or goggles when handling concentrate.
Harmful if swallowed.
Avoid breathing spray mist.
Avoid contamination of feed, foodstuffs and drinking water.
Do not use or store near heat or open flame.
May corrode metal spray equipment.
Wash equipment thoroughly after use.
May be toxic to bees; avoid application during periods of bee activity.
If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., visit CropLife Canada’s website at: www.croplife.ca.

This product contains a petroleum distillate which is moderately to highly toxic to aquatic organisms. Avoid contamination of aquatic systems during application. Do not contaminate these systems through direct application, disposal of waste or cleaning equipment.

Product Specific Precautions
Read and understand the entire label before opening this product.
If you have questions, call the manufacturer at 1-800-561-8273 or obtain technical advice from the distributor or your provincial agricultural representative. Application of this specific product must meet and/or conform to the following:

PROTECTIVE CLOTHING AND EQUIPMENT:

Groundboom:
• Mixers, loaders and applicators must wear chemical-resistant coveralls over a longsleeved shirt and long pants, a respirator, chemical-resistant gloves and eye protection when applying to areas larger than 30 ha in one day.
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, a respirator, chemical-resistant gloves and eye protection when applying to areas smaller than 30 ha in one day.

Airblast:
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves and eye protection.

Aerial application:
• All applications must use closed mixing/loading systems.
Low-pressure handwand:
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves and eye protection.

Backpack:
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves and eye protection.

High-pressure handwand:
• Mixers, loaders and applicators must wear chemical-resistant coveralls over a longsleeved shirt and long pants, respirator, chemical-resistant gloves and eye protection.
• Workers must not handle more than 1000 L of diluted product per day.

Greenhouse Vapour Treatment:
• Mixers, loaders and applicators must wear chemical-resistant coveralls over a longsleeved shirt and long pants, respirator, chemical-resistant gloves and eye protection.

FIRST AID
IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment advice.
IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice.
IF SWALLOWED: Call a poison control centre or doctor immediately for treatment advice. Do not induce vomiting unless told to do so by poison control centre or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.
IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferable by mouth-to-mouth, if possible. Call a poison control centre or doctor for treatment advice.
Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

TOXICOLOGICAL INFORMATION
Naled is a cholinesterase inhibitor. Typical symptoms of overexposure to cholinesterase inhibitors include headache, nausea, dizziness, sweating, salivation, runny nose and eyes. This may progress to muscle twitching, weakness, tremor, incoordination, vomiting, abdominal cramps and diarrhea in more serious poisonings. A life-threatening poisoning is signified by loss of consciousness, incontinence, convulsions and respiratory depression with a secondary cardiovascular component. Treat symptomatically. If exposed, plasma and red blood cell cholinesterase tests may indicate degree of exposure (baseline data are useful).
Atropine, only by injection, is the preferable antidote. Oximes, such as pralidoxime chloride, may be therapeutic if used early; however, use only in conjunction with atropine. In cases of severe acute poisoning, use antidotes immediately after establishing an open airway and respiration. With oral exposure, the decision of whether to induce vomiting or not should be made by an attending physician. NOTE: Product contains a petroleum distillate solvent. Vomiting may cause aspiration pneumonia.

DISPOSAL
Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:
1. Triple-or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.
2. Make the empty, rinsed container unsuitable for further use. If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

NOTICE TO USER: This pest control product is to be used only in accordance with the directions on the label. It is an offence under the PEST CONTROL PRODUCTS ACT to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

NET CONTENTS: 1 L - 10 L

11/12
This product is not to be used in and around homes or other residential areas such as parks, school grounds, playing fields. It is not for use by homeowners or other uncertified users.

**GENERAL LIMITATIONS:**
Do not use in conjunction with products containing trichlorfon or dichlorvos.

**COMPATIBILITY:** This product is compatible with most insecticide and fungicide formulations. Do not use with alkaline materials such as lime or bordeaux.

**RESISTANCE MANAGEMENT RECOMMENDATIONS**
For resistance management, please note that DIBROM Insecticide contains a Group 1B insecticide/acaricide. Any insect/mite population may contain individuals naturally resistant to DIBROM Insecticide and other Group 1B insecticides/acaricides. The resistant individuals may dominate the insect/mite population if this group of insecticides/acaricides are used repeatedly in the same fields. Other resistance mechanisms that are not linked to site of action but are specific for individual chemicals, such as enhanced metabolism, may also exist. Appropriate resistance-management strategies should be followed.

To delay insecticide/acaricide resistance:
• Where possible, rotate the use of DIBROM Insecticide or other Group 1B insecticides/acaricides with different groups that control the same pests in a field.
• Use tank mixtures with insecticides/acaricides from a different group when such use is permitted.
• Insecticide/acaricide use should be based on an IPM program that includes scouting, record keeping and considers cultural, biological and other chemical control practices.
• Monitor treated pest populations for resistance development.
• Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or IPM recommendations for the specific site and pest problems in your area.
• For further information and to report suspected resistance, contact Technical Service, Loveland Products Canada Inc., 1-800-328-4678 or at www.uap.ca.

**AERIAL APPLICATION INSTRUCTIONS**
Use only where aerial application is indicated on this label.

Apply only by fixed-wing or rotary aircraft equipment which has been functionally and operationally calibrated for the atmospheric conditions of the area and the application rates and conditions of this label.

Label rates, conditions and precautions are product specific. Read and understand the entire label before opening this product. Apply only at the rate recommended for aerial application on this label. Where no rate for aerial application appears for the specific use, this product cannot be applied by any type of aerial equipment. Ensure uniform application. To avoid streaked, uneven or overlapped application, use appropriate marking devices.
Use Precautions
Apply only when meteorological conditions at the treatment site allow for complete and even crop coverage.

Do not apply to any body of water. Apply only under conditions of good practice specific to aerial application as outlined in the National Aerial Pesticide Application Manual, developed by the Federal/Provincial/territorial Committee on Pest Management and Pesticides. Avoid drifting of spray onto any body of water or other non-target areas.

Coarse sprays are less likely to drift, therefore, avoid combinations of pressure and nozzle type that will result in fine particles (mist). Use low nozzle pressure (Below 300 kPa). Do not apply during periods of dead calm or when wind velocity and direction pose a risk of spray drift. Do not spray in winds exceeding 10 - 15 km per hour. Do not spray when the wind is blowing towards a nearby sensitive crop, garden, terrestrial habitat (such as shelter-belt) or aquatic habitat. Do not allow spray drift onto sensitive areas such as water, urban and residential areas.

Operator Precautions
Do not allow the pilot to mix chemicals to be loaded onto the aircraft. Loading of premixed chemicals with a closed system is permitted.

It is desirable that the pilot have communication capabilities at each treatment site at the time of application.

The field crew and the mixer/loaders must wear chemical resistant gloves, coveralls and goggles or face shield during mixing/loading, cleanup and repair. Follow the more stringent label precautions in cases where the operator precautions exceed the label recommendations on the existing ground boom label.

All personnel on the job site must wash hands and face thoroughly before eating and drinking. Protective clothing, aircraft cockpit and vehicle cabs must be decontaminated regularly.

Product Specific Precautions
Read and understand the entire label before opening this product.

If you have questions, call the manufacturer at 1-800-561-8273 or obtain technical advice from the distributor or your provincial agricultural representative. Application of this specific product must meet and/or conform to the following:

Volume: Apply the recommended rate in a minimum spray volume of 10 litres per hectare unless otherwise stated.
PROTECTIVE CLOTHING AND EQUIPMENT:

Groundboom:
• Mixers, loaders and applicators must wear chemical-resistant coveralls over a longsleeved shirt and long pants, a respirator, chemical-resistant gloves and eye protection when applying to areas larger than 30 ha in one day.
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, a respirator, chemical-resistant gloves and eye protection when applying to areas smaller than 30 ha in one day.

Airblast:
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves and eye protection.

Aerial application:
• All applications must use closed mixing/loading systems.

Low-pressure handwand:
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves and eye protection.

Backpack:
• Mixers, loaders and applicators must wear cotton coveralls over a long-sleeved shirt and long pants, chemical-resistant gloves and eye protection.

High-pressure handwand:
• Mixers, loaders and applicators must wear chemical-resistant coveralls over a longsleeved shirt and long pants, respirator, chemical-resistant gloves and eye protection.
• Workers must not handle more than 1000 L of diluted product per day.

Greenhouse Vapour Treatment:
• Mixers, loaders and applicators must wear chemical-resistant coveralls over a longsleeved shirt and long pants, respirator, chemical-resistant gloves and eye protection.

RESTRICTED ENTRY INTERVAL (REI):
• Do not allow worker entry into treated areas (outdoor or indoor) for 48 hours following application.
• If animals must be handled within 48 hours of application, wear chemical-resistant gloves.
• Greenhouses must be fully ventilated before re-entry. If the greenhouse cannot be ventilated after vapour treatment or fogging, the application should not be made.
ENVIRONMENTAL HAZARDS:
• TOXIC to aquatic organisms. Observe buffer zones specified under DIRECTIONS FOR USE.

DIRECTIONS FOR USE
Greenhouse Vapour Treatment:
• Apply using a squeeze bottle only. Do not apply using a paintbrush or any other method.
• Apply to cold pipes only. Do not apply to hot pipes
• Maximum of 3 applications (including one postharvest) per crop per cycle.
• Minimum 7-day spray interval.

Greenhouse Fogging Treatment:
• Apply with automated fogging equipment only. All workers must vacate the premises during the fogging operation.
• Maximum of 3 applications (including one postharvest) per crop per cycle.
• Minimum 7-day spray interval.

Field sprayer application:
DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE) medium classification.

Airblast application:
DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT direct spray above plants to be treated. Turn off outward pointing nozzles at row ends and outer rows. DO NOT apply when wind speed is greater than 16 km/h at the application site as measured outside of the treatment area on the upwind side.

Aerial application:
DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. DO NOT apply when wind speed is greater than 16 km/h at flying height at the site of application. For application to field crops including pastures, DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE) medium classification. For application to corrals, feedlots and holding pens, DO NOT apply with spray droplets smaller than the ASAE very fine classification.

DO NOT allow nozzle spacing to exceed 65% of boom length. DO NOT apply by air in woodlots. Workers using the maximum rate of 1.9 kg ai/ha must limit area treated to 200 ha per day.
**Buffer zones:**

The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive aquatic habitats (such as lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats).

</table>

* For field sprayer application, buffer zones can be reduced with the use of drift reducing spray shields. When using a spray boom fitted with a full shield (shroud, curtain) that extends to the crop canopy or ground, the labeled buffer zone can be reduced by 70%. When using a spray boom where individual nozzles are fitted with cone-shaped shields that are no more than 30 cm above the crop canopy or ground, the labeled buffer zone can be reduced by 30%.
EMULSIFIABLE CONCENTRATE

UNLESS OTHERWISE STATED USE THE FOLLOWING INSTRUCTIONS AND LIMITATIONS

**Use Directions:**
Begin application at first sign of insects. On all sites apply as a contact spray or thorough cover spray.

**Ground application:**
Dilute with water to 100–300 L/ha unless otherwise stated.

**Aerial application:**
Use only where aerial application is indicated. Unless otherwise stated, dilute with water to 10–30 L/ha when aerial application is specified.

**Limitations:**
Maximum 2 applications per season, unless otherwise specified. Do not apply to food or forage crops within 4 days of harvest or grazing, unless otherwise specified. Do not apply when temperature is over 32°C. Do not re-enter treated sites for 48 hours. High-pressure handwand application: Workers must not handle more than 1000 L of diluted product per day.

</tr>
</tbody>
</table>
premises during fogging operation and must not re-enter until the greenhouse has been ventilated. Do not re-enter treated areas for 48 hours after application. Thoroughly ventilate premises before re-entering. If the greenhouse cannot be ventilated after vapour treatment or fogging, the application should not be made.

NOTE: Dibrom Insecticide has not been assessed for phytotoxicity to all varieties of roses and cut flowers. If in doubt about crop safety, treat a small area of the crop to assess phytotoxicity before treating the entire greenhouse.

WARNING: Avoid over treatment and direct application to plants as injury may result. White butterfly roses, Golden rapture, Green wandering Jew and Dutchman’s pipe may be injured by Dibrom Insecticide.

| Tomato, cucumber, roses and cut flower crops (greenhouse) | Whiteflies, spider mites, aphids, leafrollers, mealybugs | Vapour treatment: 9.6 mL/100 m³ | Vapour treatment: Maximum of 3 applications per crop, per cycle. Minimum 7-day spray interval. Make no application closer than 2 days to harvest. Apply to cold pipes only. Do not apply to hot pipes. Apply undiluted to cold pipes by means of a plastic squeeze bottle. Do not apply using a paint brush or any other method. Make application when plants are dry. Apply continuously or to intermittent sections of pipe on each side and on one or more pipes through the centre of each range depending on the width of the range. Application to cold pipes should be followed by immediate heating of pipes to 41°C in steam houses, close vents for at least 1 hour after pipes are hot. With hot water systems, close house for at least 3 hours. Houses may remain closed overnight following treatment. Do not re-enter treated areas for 48 hours after application. Thoroughly ventilate premises before re-entering. If the greenhouse cannot be ventilated after vapour treatment or fogging, the application should not be made. Protect beehives in cucumber houses by covering with plastic or rubber sheet during treatment |
and until house is ventilated.

**NOTE:** Dibrom Insecticide has not been assessed for phytotoxicity to all varieties of roses and cut flowers. If in doubt about crop safety, treat a small area of the crop to assess phytotoxicity before treating the entire greenhouse.

**WARNING:** Avoid over treatment and direct application to plants as injury may result. White butterfly roses, golden rapture, green wandering Jew and Dutchman’s pipe may be injured by Dibrom Insecticide vapour treatment.

PRECAUTIONS

KEEP OUT OF REACH OF CHILDREN

Concentrate may cause skin damage.
Do not get on skin, eyes or clothing.
Use waterproof gloves and face shield or goggles when handling concentrate.
Harmful if swallowed.
Avoid breathing spray mist.
Avoid contamination of feed, foodstuffs and drinking water.
Do not use or store near heat or open flame.
May corrode metal spray equipment.
Wash equipment thoroughly after use.
May be toxic to bees; avoid application during periods of bee activity.

If this pest control product is to be used on a commodity that may be exported to the U.S.
and you require information on acceptable residue levels in the U.S., visit CropLife Canada’s
website at:  www.croplife.ca.

This product contains a petroleum distillate which is moderately to highly toxic to aquatic
organisms. Avoid contamination of aquatic systems during application. Do not contaminate
these systems through direct application, disposal of waste or cleaning equipment.

FIRST AID

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately
with plenty of water for 15-20 minutes. Call a poison control centre or doctor for treatment
advice.

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes.
Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.  Call a
poison control centre or doctor for treatment advice.

IF SWALLOWED: Call a poison control centre or doctor immediately for treatment advice.
Do not induce vomiting unless told to do so by poison control centre or doctor.  Do not give
any liquid to the person.  Do not give anything by mouth to an unconscious person.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an
ambulance, then give artificial respiration, preferable by mouth-to-mouth, if possible.  Call a
poison control centre or doctor for treatment advice.

Take container, label or product name and Pest Control Product Registration Number with
you when seeking medical attention.

TOXICOLOGICAL INFORMATION

Naled is a cholinesterase inhibitor. Typical symptoms of overexposure to cholinesterase
inhibitors include headache, nausea, dizziness, sweating, salivation, runny nose and eyes.
This may progress to muscle twitching, weakness, tremor, incoordination, vomiting,
abdominal cramps and diarrhea in more serious poisonings. A life-threatening poisoning is
signified by loss of consciousness, incontinence, convulsions and respiratory depression with a secondary cardiovascular component. Treat symptomatically. If exposed, plasma and red blood cell cholinesterase tests may indicate degree of exposure (baseline data are useful). Atropine, only by injection, is the preferable antidote. Oximes, such as pralidoxime chloride, may be therapeutic if used early; however, use only in conjunction with atropine. In cases of severe acute poisoning, use antidotes immediately after establishing an open airway and respiration. With oral exposure, the decision of whether to induce vomiting or not should be made by an attending physician. NOTE: Product contains a petroleum distillate solvent. Vomiting may cause aspiration pneumonia.

**DISPOSAL**

Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1. Triple-or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.

2. Make the empty, rinsed container unsuitable for further use. If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

**NOTICE TO USER:** This pest control product is to be used only in accordance with the directions on the label. It is an offence under the *PEST CONTROL PRODUCTS ACT* to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.
