

Foam Dye Red

Highly Concentrated Dye

Provides greater visibility to foam marking applications

- **Easy-to-use formulation**
- **Works well in adverse field conditions**
- **Will not reduce expansion capability of any foam solution**

UAP Canada Foam Dye Red is a highly concentrated dye which provides greater visibility to foam marking applications. Adverse field conditions such as sun-bleached stubble, heavy crop residue, snow, sand or alkaline areas will restrict the visibility of normal foam marks. **UAP Canada Foam Dye Red**-colored foam will help guide the applicator in these adverse conditions.

UAP Canada Foam Dye Red will not reduce the expansion capability of any foam solution. This product should not harm the soil or crop at labeled application rates.

DIRECTIONS: Add 2 oz. of **UAP Canada Foam Dye Red** per 100 gallons of foam concentrate solution,(160mL/100L).

PRECAUTIONARY STATEMENTS WARNING

Keep out of reach of children

May be irritating to eyes and skin. In case of eye contact, flush with flowing water for at least 15 minutes and consult a physician. May be harmful if swallowed. In case of ingestion, dilute with water and seek medical attention. Do not re-use this container. See Material Safety Data Sheet for more information.
