

MICROTHIOL® DISPERSS®

Micronized Wettable Sulfur

MICROTHIOL® DISPERSS® DISSOLVING IN WATER

MICROTHIOL DISPERSS

- **FORMULATION: 80 WP**
- **Pre-Harvest Interval**
 - 1-day

LABELED CROPS

- **Vegetable crops**
 - Peas
 - Cucumbers (greenhouse)
- **Fruit crops**
 - Apples
 - Pears
 - Peaches
 - Plums
 - Sweet & Sour Cherries
- **Vine crops**
 - Grapes
- **Small fruits**

PESTS LABELED FOR CONTROL

- Powdery Mildew
- Scab
- Brown Rot
- Leaf Spot
- Rust Mites
- Grape erineum mites
- *Entomosporium* leaf & berry spot

Microthiol Disperss is a uniquely patented sulfur formulation used for controlling Powdery Mildew and many other diseases and mites on peas, greenhouse cucumbers, sweet cherries, grapes, Saskatoon berry & other crops. Microthiol Disperss is a superior dry flowable sulphur that can be measured easily and accurately with virtually no dust. Microthiol Disperss goes into suspension quickly and completely, providing more consistent coverage and greater surface contact compared to traditional sulphur products.

Protect your crop investment. Ask your dealer or crop consultant about including this fungicide in your crop disease management program.

TECHNICAL ADVANTAGES

- Smaller, more consistent particle size versus standard wettable powder sulfurs.
- Excellent dispersion characteristics.
- Excellent efficacy against targeted diseases and various mite species.
- Low dust, dry flowable formulation for improved worker safety.
- Product is easy to re-disperse, if spraying is temporarily halted.
- Ideal for low volume spraying due to high dispersion and suspension characteristics.
- Excellent compatibility with other products.
- Easy-to-open bags.
