

NIMBLE™

HERBICIDE

*Because NIMBLE
contains thifensulfuron
and tribenuron, it is
similar to Refine® SG!*

NIMBLE™ Herbicide is your best choice for selective, postemergence control of broadleaf weeds in wheat, (spring, winter or durum) spring barley and oats!

HERE'S WHY: With thifensulfuron plus tribenuron as the active ingredients, NIMBLE offers outstanding application flexibility since it controls larger broadleaf weeds than many other herbicides, **AND** it quickly stops the growth of susceptible weeds.

- **EFFECTIVE CONTROL**

NIMBLE provides outstanding, control of over 40 tough broadleaf weeds, including wild buckwheat, narrow-leaved hawk's-beard, stinkweed, flixweed, chickweed and hemp-nettle with excellent crop rotation flexibility.

- **FORMULATION**

NIMBLE is available in a dry flowable dispersible granule formulation.

- **APPLICATION**

The recommended use rate for NIMBLE in most situations is 8 grams per acre. Refer to the product label for additional use rates.

- **TANK-MIX FLEXIBILITY**

NIMBLE has numerous tank mix partners, and NIMBLE plus MCPA, 2-4-D or other approved herbicides will provide premium, broad spectrum control of tough weeds like wild buckwheat,

narrow-leaved hawk's-beard, stinkweed, flixweed, chickweed and hemp-nettle while allowing excellent crop rotation flexibility.

- **CROP ROTATION FLEXIBILITY**

The active ingredients in NIMBLE break down rapidly in the soil and as a result, NIMBLE has no re-cropping limitations for the following season.

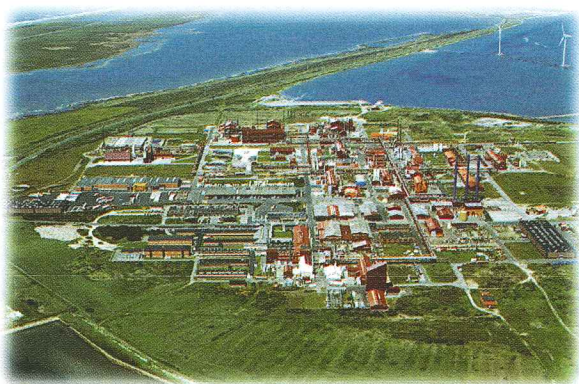

- **PACKAGING**

NIMBLE is packaged in 320 grams of product per bottle with each case containing 8 bottles. At the most commonly used rate, each bottle of NIMBLE will treat 40 acres.
