Notes to Physician

This material may reduce the clotting ability of the blood and cause bleeding. Vitamin K₁, in the form of intravenous, intramuscular or subcutaneous injections, or by oral ingestion are suggested remedial treatments for anticoagulant poisoning. The severity of the case measured by establishing prolonged prothrombin times (P.T.) will determine appropriate therapy. Monitoring P.T. will indicate the necessity of repeated treatments. Blood transfusions are indicated as in the case of hemorrhage caused by overdose of bishydroxycoumarin.

Medical Condition Likely to be Aggravated by Exposure

Bleeding and other conditions which may be aggravated by extended clotting time.
