DIRECTIONS FOR USE:

Application rate: 75 ml of inoculant (75 grams) per 27.2 kg (1 bushel) of seed.

The application rate suggested is the minimum; larger volumes of inoculant per bushel of seed have been reported to be advantageous.

- 1. SHAKE WELL BEFORE USING, MINIMUM OF 30 SECONDS.**
2. Replace bladder lid with hose kit.
3. Invert bladder above treatment area so the end of the hose is just above the seed (for accurate application rates, ensure hose is straight when dispensing inoculant).
4. Adjust dial to regulate the recommended application rate. (See table below).
5. To ensure adequate mixing of seed and inoculant DO NOT run auger at greater than HALF capacity.

FLOW VALVE SETTING	INOCULANT FLOW RATE		SEED AUGER FLOW RATE

SEED TREATMENT COMPATIBILITY

Some seed treatments are harmful to liquid inoculants. Please observe planting window recommendations for optimal responses. Contact your dealer/manufacturer for details.

STORAGE/PRECAUTIONS

Store between 4^o-9^oC (38^o-48^oF). Do not allow product to freeze. Ensure that inoculant is stored correctly in the field prior to use. Once opened, use within 24 hours. Plant seed immediately after inoculation. If seed is not planted within 4-8 hours they must be re-inoculated. Do not use inoculant that is past its expiry date or that has not been properly stored. Unless otherwise directed, do not mix inoculant with caustic fertilizers or pesticides. If soils are especially dry at planting, any risk of damage to the inoculant can be minimized through light irrigation. Under adverse or stress planting conditions (hot, dry field conditions) it is suggested to increase the inoculant application rate. For first-time fields, it is recommended that peat-based or granular inoculants be used (contact dealer for more details).
