### **Communication Plan, Phase-out of Sniper PCP # 23323**

---

Retailers and End Users will be notified of new label revisions and required mitigation measures required for using Sniper until the registrations expire on 31 December 2010.

- 1.) Letters will be sent to Retailers to inform them of the revised label requirements and the schedules for the phase out of current uses, revised uses, and registration expiry.

---

- 2.) Communication with Government Extension personnel will ensure that notice is given in Publications (ie. OMAF Pub. 360), and grower newsletters (ie.. Hortmatters), so that growers and scouts are aware that a revised label and mitigation measures are to be implemented.

---

- 3.) Notice will be posted on the UAP Canada Inc website that the Sniper 240EC label has been revised and new mitigation measures are required. This will allow field level personnel who are accessing labels and technical information from the website to see that additional precautions are required.

---

- 4.) Warning signs for areas where Sniper is used will be supplied to dealers and will be available on the UAP Canada Inc. website for users to display and provide the required warning and instruction to Re-entry personnel.

---
