

The Black Label[®] Family of Products

The Progressive Grower's Choice

Black Label products are high-phosphate fertilizers developed in a unique and patented formulation. This formulation is designed to protect applied phosphate (P) from reacting and “tying-up” with calcium and other nutrients, as traditional phosphate fertilizers can. Black Label products are very flexible and are a progressive grower's first choice to efficiently deliver phosphate in all cropping situations.

Black Label[®] Zn

Black Label[™] Canola

Black Label[™] Cereal

The Black Label Family of Products

The Progressive Grower's Choice

All Black Label products:

- Deliver P nutrition when in-season tissue levels fall below optimum levels
- Stimulate early root development and plant growth for improved yield potential
- Promote stronger, healthier crops that can help resist environmental stress
- Provide excellent crop safety

Features

- High analysis phosphate source with 80% of P in the orthophosphate form
- Added zinc for improved phosphate assimilation
- Low salt index and chloride free formulation
- Readily blends with a wide range of fertilizers and pesticides*

Benefits

- Wide application options, can be applied:
 - As a post-emergent spray with pesticides*
 - Pre-seed broadcast with a glyphosate burn-off treatment
 - In-furrow either alone or with other seed safe fertilizer formulations*
 - As a side-band or top-dressed with other fertilizer formulations*

THREE UNIQUE PRODUCTS:

Black Label Zn (6-20-0 + 0.77% Zn)

The most flexible Black Label formulation where maximum P content is required.

Black Label Canola (4-15-6 + 0.75% B + 0.3% Zn)

Designed for post-emergent applications to canola and other crops requiring additional boron.

Black Label Cereal (4-16-6 + 1.0% Cu + 0.3% Zn)

Created for post-emergent applications to wheat and other crops requiring additional copper.

Application Information:

Black Label formulations may be applied to all crops and offer flexibility to fit your operation. They are tank mixable with a broad range of pesticides* and also may be applied through drip and centre-pivot irrigation equipment. Multiple applications can be made through the season if necessary.

Black Label Zn

In-Furrow & Side-Banded Applications:

4 to 12 L/acre on its own or blended with other N, P and S fertilizers

Broadcast Applications:

Bare Soil – Apply 4 to 12L/acre in a minimum of 8 gallons/acre of water

Post-Emergent – Apply 2 to 4L/acre in a minimum of 8 gallons/acre of water

Black Label Canola and Black Label Cereal

Broadcast Applications:

Post-Emergent – Apply 1.5 to 3L/acre in a minimum of 8 gallons of water

Mixing Instructions with Pesticides:

Black Label formulations mix easily with water, as follows:

1. Partially fill tank with water and start agitation.
2. Add pesticides or other nutrients. **Black Label** formulations are compatible with **Signature™** Cu, Mn, and Zn at all rates and EDTA chelated micronutrients if used at a minimum of 8 parts to 1 part micronutrient.
3. Add the **Black Label** formulation last to the circulating tank mix.

Handling Instructions

Black Label products are compatible with most application systems. On occasion some field sprayers may need to have in-line strainers and nozzle screens equipped with a coarser mesh size. In general a 50 to 60 mesh size is recommended.
